

AMENDMENTS TO THE ABSTRACT

Please substitute the following paragraph(s) for the abstract now appearing in the currently filed specification:

An interlabial pad which can decrease leak generated on the right and left hand side of the body side and achieve a sure and sanitary wearing. The interlabial pad has a dual structure formed a main sheet body and a sub-sheet body and both sheet bodies are bonded in the front end and the back end and both sides are unbonded. Thereby, the main sheet body alone is deformed to have convex shape to be inserted between labia of a wearer. At the same time, a mini sheet piece is attached on the opposite side face to the body of the interlabial pad so that a finger can be inserted in a hollow part formed between the mini sheet and a back side sheet.
